

Meridian Fabrication Works -- Final Assembly Line

Visit date: 2026-09-08 Checklist: Lean 5S Audit

Demo data: this facility, its field notes, and its photos are entirely synthetic, generated by scripts/generate_synthetic_data.py. No real facility's data is used.

Executive Summary

2 critical/high-severity finding(s) from this lean 5s audit, led by 'Sort (Seiri)' (4 occurrence(s)). 5 finding(s) total across Meridian Fabrication Works -- Final Assembly Line. Top priority: Resolve within the week; assign an owner today. See the prioritized action list below for the full sequence.

(Synthesis method: template)

Findings

[HIGH] Sort (Seiri) (x4)

4 instance(s) matched 'Sort (Seiri)' (unnecessary items, obsolete tooling, or unused equipment left in the active work area). Field notes: At workstation 3 there's a pile of old fixtures and obsolete tooling that hasn't been used in months, just sitting in the corner; Workstation 4 has the same issue, a stack of unused brackets nobody has touched recently, kind of just junk building up. Photo evidence: a14_fixture_cart.png.

Escalation: Escalated: this finding recurred across 4 separate notes (threshold: 3).

[HIGH] Set in Order (Seiton) (x3)

3 instance(s) matched 'Set in Order (Seiton)' (tools, parts, or materials without a designated, labeled location (no shadow board, no bin label, inconsistent placement)). Field notes: Near the torque wrench station, tools are just tossed on the bench, no shadow board, so operators can't tell what's missing; Found a bin of small hardware with no designated spot near sub-assembly, hard to tell what's supposed to go there. Photo evidence: a04_tool_bench.png.

Escalation: Escalated: this finding recurred across 3 separate notes (threshold: 3).

[MEDIUM] Standardize (Seiketsu) (x2)

2 instance(s) matched 'Standardize (Seiketsu)' (two work areas doing the same job laid out differently, or a documented standard that doesn't match what's actually on the floor). Field notes: Workstation 6's layout is set up completely differently than workstation 5, even though they're doing the identical sub-assembly step, no posted standard to explain why; Checked the

5S standard sheet posted at station 3, it's dated over a year ago, doesn't match what's actually set up now.

[LOW] Shine (Seiso) (x2)

2 instance(s) matched 'Shine (Seiso)' (dirt, spills, debris, or equipment in visibly poor condition that hasn't been cleaned per a standard). Field notes: Floor near the conveyor at station 2 has some grease residue that hasn't been wiped up in a while. Photo evidence: a07_shelf_dust.png.

[LOW] Sustain (Shitsuke) (x2)

2 instance(s) matched 'Sustain (Shitsuke)' (evidence the standard was reset just before the audit, or that self-audits/checklists aren't actually being used day to day). Field notes: Asked the lead whether the daily 5S checklist gets filled out, they said honestly it's usually only completed right before a scheduled audit; Self-audit log at station 4 has gaps, several days in a row with no entry.

Prioritized Action List

#	Finding	Severity	Recommended Action
1	Sort (Seiri)	HIGH	Resolve within the week; assign an owner today.
2	Set in Order (Seiton)	HIGH	Resolve within the week; assign an owner today.
3	Standardize (Seiketsu)	MEDIUM	Schedule a fix within the next 30 days.
4	Shine (Seiso)	LOW	Fold into the next routine standard-work update.
5	Sustain (Shitsuke)	LOW	Fold into the next routine standard-work update.

Methodology & Scope

Checklist: Lean 5S Audit (lean_5s). 13 voice note(s) and 3 photo(s) processed; 3 note(s)/photo(s) did not match any checklist item confidently and were excluded from findings rather than force-fit.

This checklist is swappable -- the same pipeline can run a Lean 5S audit, a Theory of Constraints constraint walk, or a safety & compliance walk from the same field-note and photo inputs, depending on which YAML config is selected (or recommended).

Appendix: Note-to-Finding Traceability

Note ID	Type	Matched Finding	Detail
A01	text	Sort (Seiri)	At workstation 3 there's a pile of old fixtures and obsolete tooling that hasn't been used in months, just sitting in the corner.
A02	text	Sort (Seiri)	Workstation 4 has the same issue, a stack of unused brackets nobody has touched recently, kind of just junk building up.
A13	text	Sort (Seiri)	Also noticed a second pile near receiving, mostly unused packaging materials nobody's claimed, more clutter along that wall.
A14	photo	Sort (Seiri)	Obsolete fixture cart parked against the wall near final assembly, clearly not in current use.
A03	text	Set in Order (Seiton)	Near the torque wrench station, tools are just tossed on the bench, no shadow board, so operators can't tell what's missing.
A05	text	Set in Order (Seiton)	Found a bin of small hardware with no designated spot near sub-assembly, hard to tell what's supposed to go there.
A04	photo	Set in Order (Seiton)	Tool bench for workstation 5 with several hand tools loose on the surface, no outlines or labeled spots visible.
A08	text	Standardize (Seiketsu)	Workstation 6's layout is set up

			completely differently than workstation 5, even though they're doing the identical sub-assembly step, no po
A09	text	Standardize (Seiketsu)	Checked the 5S standard sheet posted at station 3, it's dated over a year ago, doesn't match what's actually set up now.
A06	text	Shine (Seiso)	Floor near the conveyor at station 2 has some grease residue that hasn't been wiped up in a while.
A07	photo	Shine (Seiso)	Dust buildup visible on the top of a shelving unit near the receiving-side racking.
A10	text	Sustain (Shitsuke)	Asked the lead whether the daily 5S checklist gets filled out, they said honestly it's usually only completed right before a scheduled audit
A11	text	Sustain (Shitsuke)	Self-audit log at station 4 has gaps, several days in a row with no entry.
